

# Software Redesign for Pharmaceutical Company

## PROJECT DETAILS

 Development

 Mar. 2018 - Ongoing

 \$50,000 to \$199,999

“

*"They provided a full team of software developers."*

## PROJECT SUMMARY

designs.codes redesigned a software application from a client/server model to a web-based software. They created a new interface, coded the website, and integrated AWS.

## PROJECT FEEDBACK

designs.codes made the software more cost-effective for customers and provide enhanced functionality. The project was managed effectively through weekly calls. The quality of the work and coding was very high.

## The Client

Please describe your company and your position there.

inventory management for Controlled Substances.

## The Challenge

For what projects/services did your company hire designs.codes?

Redesign existing software application from client Server model to Web based software.

What were your goals for this project?

New software must have the look and feel of existing system to make comfortable for existing clients while providing enhanced functionality in a web based platform.

 **Jeffrey Anderson**  
Chief Technology Officer, Airis  
Pharmaceutical Solutions

 **Healthcare**

 **1-10 Employees**

 **Depew, New York**

### CLIENT RATING

Quality: 5.0

Schedule: 4.5

Cost: 5.0

Would Refer: 5.0

## The Approach

### How did you select this vendor?

Recommended to me by one of my shareholders. They provided a full team of software developers for a fraction of the cost to hire in the states.

### Describe the project and the services they provided in detail.

They created the web based user interface for the new software, coded the web site, and established hosting with Amazon Web Services.

### What was the team composition?

Software Designer - Myself Project Manager Lead Software Developer Software Developer / Coder Server Engineer Graphic Designer

## The Outcome

### Can you share any information that demonstrates the impact that this project has had on your business?

The project has made it possible for us to offer our software to customers at a substantially reduced price while also providing enhanced functionality.

### How was project management arranged and how effective was it?

Series of weekly conference calls for status updates. Regular email updates. Language barriers were not a significant issue as the team I worked with had pretty good english.

## What did you find most impressive about this company?

Quality of work was very good. Proposed designs were generally acceptable without a lot of re-work. Finished modules had minimal bugs or errors and those that were identified were resolved quickly. Final Finished product has been in operation for approx. 1 year without any major issues reported by our clients.

## Are there any areas for improvement?

More detailed communication during development has been something I have been working with them on. Communications are often minimal with only a sentence or 2 to document a days work. As a software developer myself, I can see the work completed.
